

WHY DO WE CARE?

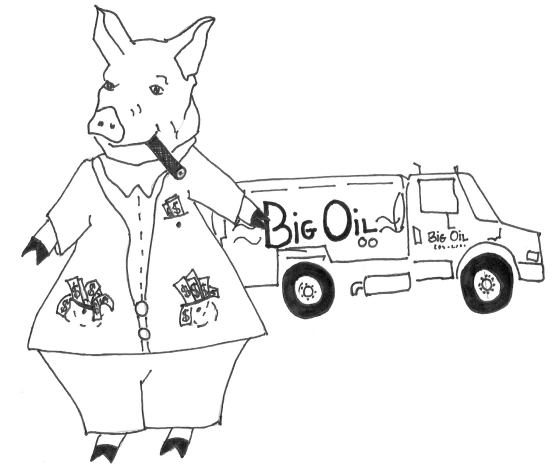

Osborne's Plumbing & Heating, Inc. is a family owned and operated business our technicians have a combined 100 years of experience in the plumbing & heating industry. But most importantly we are the parents of 24 children, including 2 born this year. At the current rate of oil consumption our children will be forced to live in a world that runs out of oil.

OSBORNE'S PLUMBING & HEATING, INC

It is time to put big
oil on a diet. And
save \$\$\$\$\$\$

REDUCE YOUR OIL BILL
REDUCE OUR DEPENDENCE
HELP THE ENVIRONMENT

In 1997 the U.S. Geologic Survey (USGS) put the world's known reserves -- those that can be profitably produced with existing technology -- at nearly 1 trillion barrels, or about eight times the 1953 level. At current consumption rates, that was enough oil to support our planet's petroleum needs for about 45 years(2043).

About 12 million homes in the US are heated with oil. If each of these homes conserved 1 gallon of oil annually the State of Maine could heat its buildings for 12 additional years.

Exxon Mobil second quarter earnings exceed \$10 Billion. No. 1 U.S. oil company earns \$1,318 a second. The \$10 billion earnings is second only to the record \$10.7 billion Exxon earned in the fourth quarter of 2005. Last year Exxon Mobil gave its outgoing CEO a retirement package worth about \$350 million

WHAT CAN YOU DO?

- 1) Lower your thermostat when you are not at home. Reducing your temperature setting by 5 degrees when you are not home can save you 5% on your heating oil bill.
- 2) Vacuum your baseboard or use a broom to sweep out dust and lint.
- 3) Don't block your baseboard. Furniture, clothing, drapes etc. all serve to insulate your baseboard. Even clothing piled up on a radiant floor will reduce the effectiveness.
- 4) Close closet doors.
- 5) Weather strip windows and doors.
- 6) Insulate your attics and floors.
- 7) Raise your humidity level in the winter, a dry house feels colder.
- 8) Is your oil heat system old and inefficient a new system could save up to 40% on your heat bill. Even changing your burner only could save up to 15%
- 9) Get your heat system tuned up annually. Having your system cleaned and tuned can save 5% on your annual heat bill. Also a properly tuned system tends to run better with less breakdowns.

SERVICES OFFERED

New construction

Remodels

Heat system installs

Radiant systems

Annual heat system tune up

Plumbing installation & repairs

Snowmelt systems

Boiler replacement

Boiler controls

Water heaters

Well pumps

Water filters

Oil tanks

Camp openings & closings
