# PRICE OF HOME HEATING OIL IN THE U.S.

Oil prices affect your heating costs directly and since there is nothing you can do about the price of oil, you can reduce the amount that you use.

## HOW DOES YOUR HEATING SYSTEM WORK

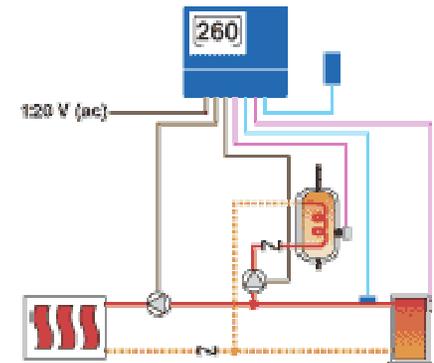

When the temperature in your house drops below the thermostat setting, a signal is sent to turn the boiler on. However, the thermostat only knows stop and go nothing in between.

HOW MANY MILES PER GALLON WOULD your car get if the only way of accelerating was to floor it until you get to speed then hit the brakes to keep from speeding. This is exactly how your heat system works. The boiler heats up (car accelerating) until your house is too warm and the thermostat (brakes) turns the boiler off.

HOW YOUR HEATING SYSTEM SHOULD work, you adjust your car's gas pedal to maintain a comfortable driving speed and good fuel economy. Why not the same with your heating system? By adding a tekmar Outdoor Reset Control, your heating system is adjusted to maintain comfort and improve system efficiency.

HOW YOU CAN FIX THIS PROBLEM BY installing a Outdoor Reset Control, your heating system will know if it is a cool fall night or a frigid winter day. This allows the boiler to run at different water temperatures and could save up to 30%

## HOW MUCH WILL A CONTROL COST?

The average installed price of a Tekmar 260 is around \$500.00 depending on the type of system and existing zone controls.

WILL THE OUTDOOR RESET WORK WITH my system? Outdoor reset works with all hot water boilers that do not have a tankless coil.

I HAVE A TANKLESS COIL WHAT CAN I do? We also install indirect water heaters which will allow your boiler to adjust water temperature as needed.
